

# WELCOME TO SCITY

## AFTER COVID-19 PANDEMIC...

- ★ After COVID-19 pandemic, online channels use priority in interaction and communication

## AFTER 30 YEARS...

- ★ After 30 years the concept of "Metaverse" was born, it has become natural to go with the development of technology

GAME ONLINE ★

SOCIAL MEDIA ★

VIRTUAL REALITY ★

## IN THE NEAR FUTURE: METAVERSE

- ★ The mainstream of virtual space
- ★ Limitless opportunities for creativity, imagination & business investment

“

Metaverse is coming

Jensen Huang (Nvidia CEO)

“

I'm completely in the middle of the metaverse right now. I think the metaverse is snugly approaching all of us. We'll see more and more realtime three-dimensional (3D) worlds

John Riccitiello (Unity CEO)

## SOCIALVERSE CITY | SCity

Build the core blockchain platform ★

Support application implementation, virtual expansion ★

# ABSTRACT

SCITY is a virtual reality platform powered by the BSC blockchain, encompassing NFT

CREATION

MONETIZE CONTENT AND APPLICATIONS

EXPERIENCE

## LAND IN SCITY

- ★ Limited digital assets
- ★ Transferable
- ★ Stored in an BSC smart contract
- ★ Permanently owned by the community

Land owners control what content is published ★  
to their portion of land

Content can range from static 3D scenes to ★  
interactive systems such as games

## BEP-20 SCC TOKEN

- ★ Buy land
- ★ Buy digital goods & services

## AT SCITY - A 3D NEW WORLD

Not controlled by a centralized organization ★

## NO SINGLE AGENT HAS THE RIGHT TO

- ★ Modify the software's rules
- ★ Contents of the land
- ★ The economics of money
- ★ Prevent others from accessing the world

## CHAPTER 1

# INTRODUCTION

### 1.1. METAVERSE MARKET POTENTIAL

#### A | NFT MARKET POTENTIAL

#### NFT sales surge to \$10.7 billion in Q3 – DappRadar

Quarterly non-fungible token sales volumes across multiple blockchains, in U.S. dollars

Note: DappRadar is a company which tracks on-chain NFT sales across multiple blockchains including Ethereum, Flow, Wax and BSC. Source: DappRadar

#### B | METAVERSE EXPLAINED

★ Metaverse is a combination of multiple elements of technology, including virtual reality, augmented reality and videos where users 'live' within a whole new digital universe.

#### THE METAVERSE

Augmented Reality ★

Mirror World ★

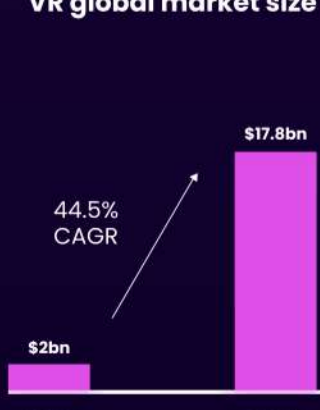

Lifelogging ★

Virtual World ★

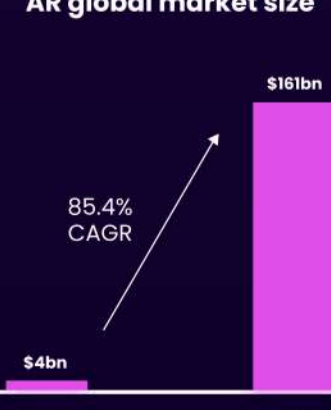

#### C | METAVERSE POTENTIAL

VR global market size

AR global market size

■ (\$ billions)

■ (\$ billions)

## 1.2. WHAT'S SCITY?

SCITY IS A METAVERSE MULTI-PLAYER GAME  
BUILT ON BLOCKCHAIN TECHNOLOGY

The game background is based on the world's busiest cities, where digital real estates and other assets are available to be purchased. Users are encouraged to build their empire and explore unlimited earnings all the way.

## CHAPTER 2

# GAMEPLAY

LAYER 1 | DEFI CITY

## OVERVIEW

BUY LAND

OPEN BUSINESS

STAKE & EARN

## NFT LAND

### SCity

Will open sale of land slots in cities.

With the first 4 cities:

Toronto, Hong Kong, Rome and El Salvado.

Players can buy and own their own land NFTs.

Each land NFT will include the following attributes

- ★ **Unique ID:** Unique code of NFT land.  
Example: Toronto #123
- ★ **Location:** Show the location of your land slot on the city map.  
Example: If your coordinates are 22x34, it means that your land slot is located at x=22 & z=34 on the map.
- ★ **Par Value:** Original value of NFT land.  
Example: The price of 1 Toronto land slot is 20 \$SCC -> Par Value = 20 \$SCC
- ★ **Mining Efficiency:** When you buy land slots, you will randomly receive mining efficiency from 100%-200%. The higher the Mining Efficiency when staking, the more tokens you will receive.
- ★ **Mining Power:** How's the current value of the NFT land.  
$$\text{Mining Power} = \text{Par Value} * \text{Mining efficiency}$$
- ★ **Rarity:** The rarity of the NFT land. Based on Mining Efficiency to determine.  
  - 100% - 120%: B
  - 120% - 140%: A
  - 140% - 160%: R
  - 160% - 180%: SR
  - 180% - 200%: SSR

# FARMING

- Yield Farm allows users to earn \$SCC while supporting SCITY by staking LP Tokens.

- Yield Farm APR calculation includes both the rewards earned through providing liquidity and rewards earned staking LP Tokens in the Farm.

### Example:

Imagine the SCC/BUSD stats are as follow:

Liquidity: \$15M  
Volume 24H: \$5M  
Volume 7D: 35M

1. To calculate the APR, first we take the 24hour volume, \$5,000,000, and calculate the fee-share of LP-holders, 0.17% [ $\$5,000,000 * 0.17 / 100 = \$8,500$ ].
2. Next, we estimate the yearly fees based on the 24h volume [ $\$8,500 * 365 = \$3,102,500$ ].
3. Now we can calculate the fee APR with yearly fees divided by li-liquidity [( $\$3,102,500 / \$15,000,000$ )\*100 = 20.68%].
4. With the fee APR, we can add the fee APR (20.68%) and the Farm staking APR (20.08%) to get the new total APR [ $20.68% + 20.08% = 40.76%$ ].

# TOKEN STAKING

- Staking allows users to Earn SCC by simply depositing their tokens in the Staking Pool.

- It is much simpler than farming because, unlike the Farms, you only need to stake one token to start earning: usually SCC.

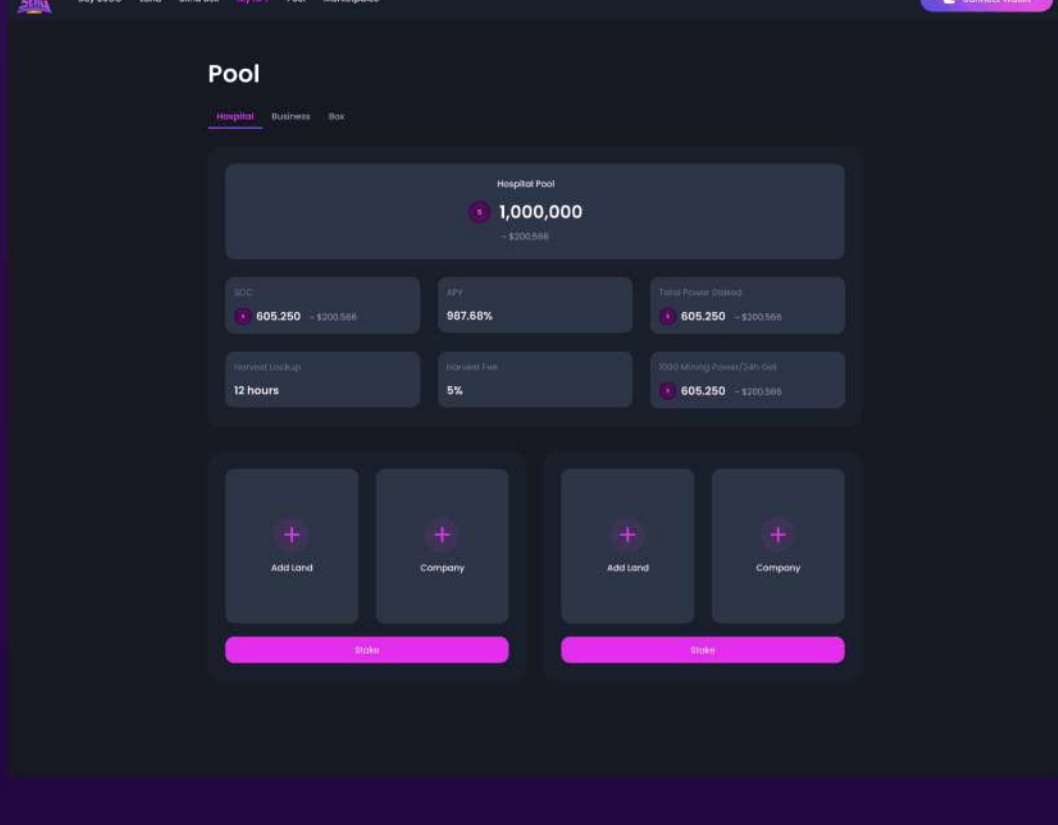

### The process is rather fast and simple:

- ★ Go to the Pool tab
- ★ Select the Pool you want Stake in
- ★ Click on Approve SCC
- ★ Enter the amount you would like to Stake
- ★ Click Confirm and Enjoy your daily earning

# NFT STAKING

## Player can Stake NFT in NFT Pool to get \$SCC Token

Land NFTs and Business NFTs are not purely cosmetic, but a good tool to increase your \$SCC balance in the NFT Pools. Go to the Pool page and select the NFT tab. You will be able to see the available pools.

Stake one city NFT and one business NFT into pool. We have 6 different NFT pools, depending on your business NFT:

- ★ Transport NFT
- ★ Agriculture NFT
- ★ Construction NFT
- ★ Education NFT
- ★ Food NFT
- ★ Medi NFT

You can check the new Total Power Staked (= total mining power of all your staked NFT). The higher is Total Power Staked is,

### Harvest

To harvest your Reward click on the Harvest icon. Note that your rewards can only be harvested every 12hours.

### Unstake

To Unstake your NFT you can click "Unstake" and to withdraw all your NFT you can click on "Withdraw all"  
The NFT Pool rewards will be reset on the given period. Your NFT will not be unstaked and will remain in the pool.

## LAYER 2 | 3D CITY

# OVERVIEW

Data about the owners of the NFTs lands & business in Layer 1 → Generate a 3D city map

### Players can:

- + See their land slots, business
- + Visit friend's land
- + Creatively put in unique architectures

Every month, SCity will hold design contests. Using the Governance feature, players will vote to see if they want to bring these designs to the city (Create to earn).

# GOVERNANCE

- Every SCC Holder is in fact a member of the Decentralized Autonomous Organization (DAO).
- To participate in the governance process, DAO members will have to stake their SCC token.
- + Only deposited SCC can be charged for votes.
- + By participating in the voting process, SCC Holders directly contribute and build together the future of SCity universe.
- Occasionally, active DAO participants will also be rewarded for their great contributions to the ecosystem such as limited edition NFT items from SCity or simply SCC rewards.

## LAYER 3 | VR 360 CITY

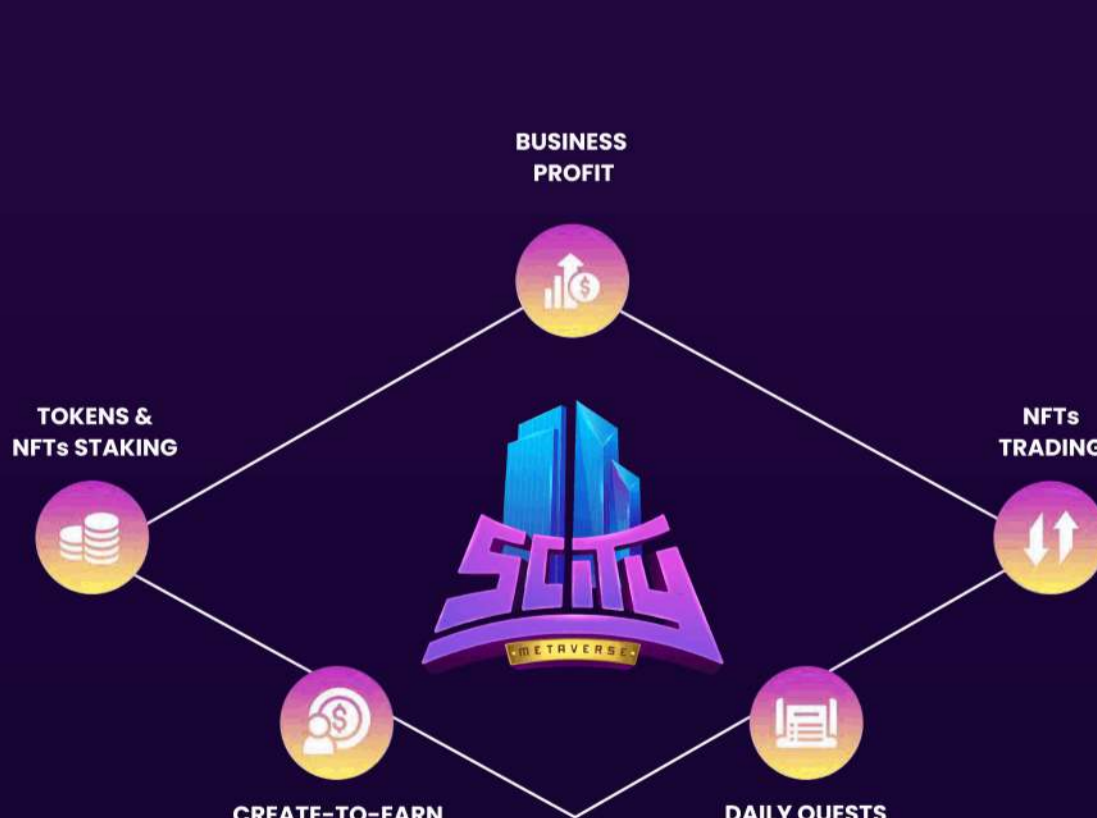

In layer 3 players can click on each house to see the architecture inside it. SCity will work with real-world businesses to bring their showrooms and stores into the game

## LAYER 4 | SOCIALVERSE CITY

In this layer, SCity will create shared spaces for cinemas, parks, gyms, schools,... Players can interact, play together, learn together, ... connect together to create a real community

## EARNING WITH SCITY

## MARKETING WITH SCITY

# NFT BUSINESS

Players can own NFT businesses by purchasing 'Business Box' on the marketplace.

**Each Business NFT has its own level.**

+ The higher the level, the greater the mining power of Business NFT.

+ Players can use the business upgrade feature to merge NFT cards of the same level to a higher level.

**Business Box can open 1 of the following NFT Business:**

- Transport NFT
- Agriculture NFT
- Construction NFT
- Education NFT
- Food NFT
- Medi NFT

# NFT MARKETPLACE

NFT MARKETPLACE

**Players can sell/buy NFTs on SCity Marketplace**

NFT can be purchased in the NFT market with \$SCC.

After NFT is listed in the trading market, operations such as transfer and stake mining are not allowed.

The market will charge 3% of the seller's revenue as a service fee, of which 50% is burned, 40% enters the SCC NFT Pool, and 10% is the developer's revenue.

## CHAPTER 3

# TOKENOMICS

### 3.1. TOKENOMICS

#### TOKEN NAME

Socialverse City Coin

#### SYMBOR

SCC

#### CHAIN

BNB Chain

#### TOTAL SUPPLY

10,000,000,000 SCC

#### INITIAL CIRCULATING SUPPLY

240,000,000 SCC

#### INITIAL MARKETCAP

4,800,000 USD

#### LISTING PRICE

0,02 USD

#### THE PRIMARY UTILITIES OF SCC

BUY NFT CITY

BUY NFT BUSINESS

PAYMENT IN NFTS MARKETPLACE

AND MORE USER CASES IN THE FUTURE

## 3.2. TOKEN ALLOCATION

## CHAPTER 4

# TECHNOLOGY

### 4.1. MULTI-CHAIN

SCITY IS BUILT ON MULTI-CHAIN BSC & NEAR

#### BINANCE SMART CHAIN

### Main Advantages of Binance Smart Chain

-  **Combining**  
Binance Chain & BSC technologies
-  **Short**  
Block generation time
-  **Low**  
Transaction costs
-  **Quickly**  
Convert assets
-  **EVM-compatible**  
Cross-chain
-  **Efficiency**  
Improve work for programmers

#### NEAR PROTOCOL

**Highly scalable**

**Reduce transaction costs of DeFi projects**

**Create decentralized applications easily**

**Secure enough to manage high-value assets**

With high throughput, low latency, powerful query functionality, decentralized control, immutable date storage and built-in asset support, BigChainDB is like a database with blockchain characteristics

Decentralization

Query

Immutability

Assets &amp; Tokens

BigChainDB allows developers and enterprise to deploy blockchain proof-of-concepts, platforms and applications with a blockchain database, supporting a wide range of industries and use cases.

BIGCHAINDB

**Why did we choose BigchainDB to establish all game logic instead of traditional blockchain?**

**No Transaction Fees:** All player transactions will be done without any blockchain transaction fees.

**High performance:** All transactions can be done instantly..

**Queryable:** That's friendly to our developers.

**All the characteristics of Blockchain:** Decentralization and immutability make our player data safe and transparent on BigchainDB.
